message Gateway was number one in the highend consumer market. In early 1993, there was a staff meeting to address how to pursue this emerging market. At this meeting, it was decided to launch a new highend product line to compete with Gateway. Vernon Weiss was assigned as product manager to spearhead and manage the marketing of the new product. He worked with Brian Zucker who led the architecture and engineering effort. In September 1993, the first two versions of the XPS line were announced.http://gloteckr.com/upload/editor/installation-manual-for-panasonic-kx-ta624.xml

The first generation of the XPS system was available as either a desktop or a tower case.The XPS mainly competes against computers such as Acer s Aspire, HP s Pavilion and Envy, Lenovo s IdeaPad, Samsung s Sens and Toshiba s Satellite.In 2005 Dell revamped the XPS line to compete with Alienware now owned by Dell and Falcon Northwest.Consumer notebooks were also separated into two lines Inspiron and XPS. While the XPS designation used to mean the hardware was highend and well suited for gaming, that is no longer the case. For example, the XPS 200 is limited to extremely lowend video cards, while the XPS M140 is only configurable with Intel video, thus making both systems unsuited for gaming or highend usage.Three systems were introduced the XPS Tower, XPS Tower VR, and the XPS Tower Special Edition.It is designed for moderate to heavy gaming and highend workstation performance. It features Intels 6thgeneration Skylake i5 and i7 CPUs on an LGA 1151 socket. It also includes an upgrade to higherbandwidth DDR4 memory.It was designed for moderate to heavy gaming and highend workstation performance. It features a Dell 0KWVT8 motherboard with an LGA1150 socket. It comes with a quadcore Intel Core i7 processor and an Nvidia Geforce GTX 660. A special edition is available with an AMD Radeon R9 270.There are dust particles trapped between the screen and the touch panel. Some buyers even received several exchanges or screens replacements and the issue still remains. Some people may not notice but turning the brightness up will show these spots. They look like dead pixels.This is a PC with performance somewhat between the XPS 420 and 630. Its processor is the Intel Core i7. The current Studio XPS models, however, are not as gameroriented, with only one PCIe x16 slot and a 475 watt power supply.The 20inch model has an Intel Core 2 Duo E4500, while the 24inch model has an Intel Core 2 Quad Q8200.

The XPS One 20 has integrated Intel GMA 3100 graphics, while the XPS One 24 has integrated Intel GMA X4500HD graphics, and can be customized with an nVidia GeForce 9600M GT graphics card when chosen with PRODUCT RED. The 20inch model has integrated High Definition Audio and 10 watt stereo speakers, while the 24inch model has SoundBlaster Audigy HD software with 25 watt premium JBL speakers with an integrated subwoofer. The XPS One 20 and XPS One 24 were subsequently discontinued by Dell.It is an allinone computer that also functions as a large tablet.It contained an Intel Pentium II Klamath CPU, EDO DRAM, and an i440FX chipset.It contained an Intel Pentium II Klamath CPU, SDRAM, and an i440LX chipset.It contained an Intel Pentium II Deschutes CPU, SDRAM, and an i440BX chipset.It contained an Intel Pentium III CPU, SDRAM, and an i440BX chipset.It contained an Intel Pentium III CPU, 128 MB of RDRAM, an ATi RAGE graphics card, and an i820 chipset.It was replaced by the XPS 210, which is nearly identical to its predecessor. The main exception in this case is the upgrade to an Intel Core 2 Duo processor and other minor adjustments.It does not use fullsize PCI slots. The XPS 200 is aimed at being a lowimpact machine, meaning it blends in better with the rooms features. It is more of a multimedia computer than an actual gaming machine, despite the XPS name. The main difference between the XPS 210 and its predecessor, the XPS 200, is the upgrade to the Intel Core 2 Duo processor line. This makes the XPS 210 faster than the XPS 200.It was replaced by the XPS 410, which is nearly identical with the exception of an optional Intel Core 2 Duo processor and slightly different audio and video card optionsIt features a base configuration of an Intel Core 2 Duo processor, and a 2.4 GHz Core 2 Quad is also available as an option. Other base options include the Nvidia GeForce 7300LE, 7200RPM SATA 300 hard drive, and dualchannel DDR2 RAM.

http://superbia.lgbt/flotaganis/1647629233

The case is nearly identical to that of the Dimension E520, with an additional 3.5inch drive bay being added. The case is physically taller because of this. The power supply is also slightly more powerful than the Dimension E520 375 W vs 305 W, respectively and has an added 6 pin PCIe power cable. The XPS 410 replaced the XPS 400. It was replaced by the XPS 420. XPS 410 units were also sold as the Dimension 9200, allowing Dell to continue selling remaining units after the XPS 410 was discontinued.This was Dells media based computer featuring the Dell Xcelerator a simple and effective Video Recorder, and an LCD screen in the case, running Windows Vista SideShow. As usual with the 4XX Line of XPSs, it did not allow for SLI Graphics.The systems motherboard used Intels X58 chipset, allowing for 3 memory channels over 6 available DIMM slots. The XPS 435T is able to support Westmerebased Core i7 and Xeon processors supporting up to 6 cores with the latest BIOS update.Unlike the 435T, the 435MTs BIOS was never updated to support Westmerebased Core i7 or Xeon chips. The motherboard is a variation of the MSI 7591 MicroATX.This case has not changed significantly over the past several generations, with the large aluminum plate on the front. Discontinued a few days after XPS 700 launch and succeeded by the XPS 700.There is no physical differences between the 630 and the 630i.BIOS updates were issued to patch the constant HDD LED activity. Some 630i owners have bypassed the aforementioned problems by swapping out the Dellmodified 650i motherboard with OEM motherboards such as the EVGA nForce 780i SLI FTW. The motherboard has 8 lanes wired for each PCIe slot, which can restrict performance if using a single highperformance graphics card. Performance is equivalent to other systems with 650i chipset motherboards when using two graphics cards in SLI mode.This desktop was advertised as being overclockable but was not.

http://addi800.com/images/Creamware-Minimax-Asb-Manual.pdf

Dell would later offer a free XPS 720 motherboard upgrade program to all XPS 700 and 710 owners so that these machines could be overclocked with the bios. The XPS 700 used significantly larger power supplies 750 watt and 1 kilowattthan the other XPS models to accommodate higherend video cards and overclocked CPUs. Unlike its forerunners, it used a BTX motherboard, thereby limiting upgradability.Other features include dual nVidia GeForce 7950 GX2 in Quad SLI mode, 7200RPM SATA hard drive, dualchannel DDR2 RAM. The XPS 710 uses significantly larger power supplies than the other XPS models to accommodate higherend video cards and overclocked CPUs. It was replaced by the XPS 720.The XPS 720 H2C uses slightly higher quality parts than other XPS classes. At the time it was one of the most powerful and fastest prebuilt systems an individual could purchase by a significant margin.The basic model specs of the PC were Intel Core 2 Extreme Processor QX9650 3.46 GHz Overclocked, DUAL 1 GB ATI Radeon 3870 X2 Crossfire X Graphics Card, 2 GB Memory, 1 TB 7200rpm Dual HDD. This has since been replaced by the XPS 730x see above.The XPS 730X H2C was the higherend version of the 730X that made use of H2Ceramic cooling and often shipped with factoryoverclocked Core i7 Extreme Edition processors. The 730X also integrates Alienware s AlienFX and a new theatre lighting system. The internals of the 730X have also been redone for ease of upgrades, although most of the inside remains the same. The 730X supported a TriChannel of 6 GB of DDR3. The graphics card support was either a dual or single NVIDIA Geforce GTX 285, or a single ATI Radeon HD 4870 X2. The 730X originally shipped with Windows Vista, but eventually offered Windows 7 near the end of its availability. Dell internally discontinued the XPS 730X and XPS 730X H2C in its US online store on August 1, 2009 and cancelled any remaining orders after August 15, 2009.

http://intrasservices.com/images/Creader-Vi-Manual.pdf

It has been mentioned that this was done to focus more attention for customers seeking gaming computers, such as Alienware. The desktop was officially discontinued on September 17, 2009 see

Dell XPS 730x .The three new laptops, released in October 2010, have many new features and specifications from the old models. They feature JBL speakers with Waves MaxxAudio 3 technology, and have integrated 3D graphics. The line is the first to be Skype certified for video chat. They have Intel i5 and i7 processors.It features an 11.6inch screen that can be folded backwards almost 360 degrees to act as a tablet.The convertible mirrors the general aesthetic of the Dell XPS 13 ultrabook and other models in the XPS lineup, although the hybrid swaps out its predecessors aluminum look for a carbonfiber exterior. The lid and exterior edge are framed by a machined aluminum edge, while the interior consists of a magnesiumalloy palm rest coated in matte black paint. The Dell XPS 12s body was made with a fingerprintresisting coating. It possesses a hinged, flipscreen LCD. Applying a push to the top of the screen frees the 12.5 inches, 19201080 resolution, 400nit brightness display from the magnetic locks that hold it in place. The convertibles 1.7 GHz Core i53317U processor sports Intel HD Graphics 4000 integrated graphics, which combine with 4 GB of RAM and a 128 GB solidstate drive and Core i5 processor, but ups the memory to 8 GB and the storage to 256 GB. Some models configuration includes the Core i7 processor, 8 GB of RAM, and the 256 GB SSD.This upgrade came as a boost in the Ultrabooks performance as well as battery life. Dell also added near field communication in this device.The hinge system was removed and replaced with a fully detachable display. The device has a 4K Ultra HD 38602160 display, a kickstand and an 8MP rear camera and a 5MP front camera. The new XPS 12 has an allmetal build from the new XPS 13.It is the companys first Ultrabook, a term coined by Intel.

The edges are rounded and the bottom is made of carbon fibre, with a gentle silicone surface treatment. A battery level indicator was also present, and is functional when powered off.The XPS 13 Developer Edition comes preloaded with Ubuntu 18.04 LTS.The laptop also features face recognition to login.The battery capacity dropped from 60 watthours to 52 watthours, most likely due to the smaller form factor. Dell has dropped the barrelstyle connector, previously used to charge the device, and now includes two Thunderbolt 3, a micro SD card reader, one USBC port and one headphone jack. Dell is also offering a model in white, which uses a different palm rest material than the previous carbon fiber palm rest and deck on the 9360.Dell again includes two Thunderbolt 3, a micro SD card reader, one USBC port and one headphone jack. This refresh has Intels 8th generation Core i38145U, i58265U, and Core i78565U processors, codenamed Whiskey Lake.It has a new 13.4 inch screen with aspect ratio of 1610, and was launched in August 2019. This model has a soldered SSD which cannot be upgraded.It is physically identical to the early 2019 XPS 13 9380.It was launched during CES 2020.It is equipped with a 2011 1 GB NVIDIA GeForce GT 420M Graphics for Corei5 processors and GT 425M for Corei7 processors.it can also be customized with up to 8 GB of DDR3 memory. The computer can either have a 500 GB 7200 RPM SATA hard drive, or a 256 GB solid state drive. This laptop has a sleek anodized aluminium LCD back cover.It is equipped with a 2012 NVIDIA GT 630M on higher models or Intel HD graphics 4000 on the base model, and can be customized with up to 8 GB of DDR3 memory. The computer can either have a 500 GB 7200 RPM SATA hard drive, or a 256 GB solid state drive.This made it a good gaming laptop for its time. The base model comes with 500 GB 7200 rpm SATA hard drive. The computer can either have a 640 GB 7200 RPM SATA hard drive, or a 256 GB solidstate drive.

The screen resolution is either 1366768 or 19201080. The Nvidia graphics card used in Dell 15 L501x turns off or on automatically for specific applications demanding dedicated graphics. It is equipped with 2 MP webcam. It has two USB 3.0 ports and one eSATAp port. The following year the XPS 15 L502x had both its processor and graphics card upgraded, with the processor being upgraded from the Arrandale to the Sandy Bridge chipset and the graphics upgraded to either a Nvidia 525M or 540M with 1 or 2 GB of ram respectively.Includes a 15.6inch screen 1920x1080 Corning Gorilla Glass FHD WLED with TrueLife and was much thinner than its predecessor. Its design was similar to Dell XPS 13 L321X and Dell XPS 14 L421X the edges are rounded and the bottom is made of carbon fiber, with a gentle silicone surface treatment.The base model XPS 15

comes with a 19201080 touchscreen display it is unclear if this is a TN panel or not, 500 GB HDD with 32 GB msata SSD cache, dualcore i54200H CPU, 8 GB RAM, integrated HD 4400 Graphics, and a 61Wh battery. A midrange model has a quadcore i74702HQ CPU, 32001800 PPS similar to IPS touchscreen, 16 GB RAM, GT 750M GDDR5 GPU, a 1 TB HDD with 32 GB SSD cache, and a 61Wh battery.The chicletkeys of backlight keyboard are matte black and feature a slightly concave surface area.The new model aligned with the previous model 9550 in terms of dimension and exterior ports, but inside the CPU and GPU were upgraded to Kaby Lake and GTX 1050, respectively.This convertible laptop features the 8th Generation Intel mobile processors with AMD GPUs integrated into the chip package. It was announced at CES 2018. This XPS 15 utilizes LPDDR3 RAM, which is soldered and not upgradable.This new model brings options for the new Coffee Lake quadcore Core i5, hexacore Core i7 and Core i9 processors, with the option for the latter, the sixcore Core i98950HK, being clocked at 2.9 GHz, with a boost clock of 4.8 GHz and the ability to be overclocked as well.

This new model also comes with an option for the NVIDIA GeForce GTX 1050Ti graphics card, and has the optional fingerprint scanner integrated into the power button. The webcam placement has also been shifted to be underneath the DELL logo on the bottom of the display.It supports up to 64GB of memory with a bandwidth of 2666 MHz, as well as 2TB PCIe SSD storage. Launched on 27 June.The XPS 15 also got a smaller and higher resolution webcam of 720p, and more powerful speakers that aim up out of the laptop. It also got updated inside, including 10th Gen Intel Comet Lake CPU. DELL also offers two types of 15.6inch Infinity Edge display 1920 x 1200 or 3840 x 2400, and two different capacity batteries 56WHr or 86Whr. Size 13.57 x 9 x 0.7 inches, Weight 4 pounds nontouch, 56Whr battery, 4.5 pounds touch, 86Whr battery.It is noted for having a very similar design to the current generation Apple Macbook Pro computer, and even sported a silver aluminum casing. The computer can either have a 750 GB 7200 RPM hard drive or a 256 GB solid state drive. Throughout its production, the XPS 15z was plagued with DCP latency related sound spikes due to faulty network drivers provided by Dell. The solution was to use third party drivers, as discovered by a community of forum users. Another chronic issue was the lower right corner of the LCD going dim at random times. Replacement of the entire LCD assembly would only temporarily solve this problem. Production of the XPS 15z ceased in the first half of 2012, but its design was carried on by the XPS 14z.It also has an LCD upgrade of 19201080 Full HD and 3D display kit.It will offer Intels latest 10th Gen Core i9 45W processors, 64GB of RAM, and 2TB of storage.Compared to its predecessor, the XPS M1710, the model M1730 was physically redesigned with a completely new chassis available in a grey, white, blue, or red. Also like its predecessor, it featured a 17inch widescreen.

From the components angle, it supported overclockable Intel Core 2 Extreme processors 2.8 GHz to 3.4 GHz overclocked via the X7900 or X9000 Processor, dual NVIDIA GeForce 9800M GTX video cards in SLI, up to two 7200 RPM SATA hard drives available in RAID, and up to 8 GB DDR2 SDRAM. A Bluray Disc Drive was an option in some models. New with this latest version was a built in optional AGEIA physics card to enable PhysX enhanced titles take advantage of hardware accelerated physics, the option for 64 GB solid state drives, a back lit keyboard including a number pad, and a Logitech gaming LCD display above the keyboard.Thus, performs slightly better than the 9800M GT and 8800M GTX cards. The availability of the 9800M GTX SLI is rare, and may only be purchased in limited Dell direct outlets and on eBay. And in most cases, they are either out of stock, not on sale any longer or selling the previous 9800M GT and 8800M GTX graphics cards.The XPS M1530 is almost identical in design to the XPS M1330 except that it has 4 different colors blue, black, pink and red and it is a bit thicker and heavier with a 15.4inch CCFL or LED screen. Wireless draftn is also available 802.11n . The XPS M1530 includes a biometric fingerprint reader and a 2 MP webcam. Another option for this laptop is a glossy 19201200 display, even though it is 9 inches smaller than Dells 24 inch monitor.Dell became aware that the problem was limited to Nvidia chip

production, the BIOS was updated to A12 which improves thermal control but does not prevent it from reoccurring. The problem associated with Nvidia GPUs was the chip material used could not stand high temperatures.It features a 13.3inch screen either with CCFL or WLED. The WLEDbacklit version has a 0.3 MP camera, as opposed to the 2 MP camera with the CCFL screen. The XPS 1330 with the WLED screen is thinner and brighter than the previous XPS 1210 version, the thinner WLED screen forcing the optics in the camera to be limited to 0.3 MP.

Moreover, XPS 1330 can also feature a biometric fingerprint reader, usually found in business class laptops like the Latitude series. The XPS M1330 also offers the NVIDIA GeForce Go 8400M GS graphics card as an option. Originally, it could only be configured with Intel Core 2 Duo mobile processors up to T7700 2.4 GHz, but could later be configured with processors up to the Intel Core 2 Duo T9500. Noted for its light weight of only 1.8 kg, the XPS M1330 is also available in the product red line along with other Dell computers.It has been replaced by the M1340 Studio XPS 13.This problem was exacerbated by poor thermal contact between the chip and the heat pipe the gap is too big. Some people have overcome the graphics chip overheating problem by fashioning a heat sink using a copper plate and thermal paste to fill the gap between the heat pipe and the graphics chip.Its full body is piano black and silver.When configured with the 9500M GE you are able to switch between the 9400M G running standalone and the 9400M G with the 9200M GS in Windows Vista, without logging out and back in like you must with Apple products due to the availability of Hybrid SLI. Although this model is still available in Europe with the 512 MB nVidia GeForce 210M graphics card and the NVIDIA GeForce MCP79MX Chipset.No replacement 13inch Studio XPS has been announced.It has an illuminated QWERTY keyboard and leather accents on the lid are optional. Its full body is onyx black and silver.Dell was able to provide a fix for the issue with the help of community input.The M1647 motherboard still uses the Intel PM55 chipset as the M1645 but overall the motherboard uses less power than its predecessor.This computer was replaced by the XPS M1730.With the standard battery, the laptop weights 1.9 kilograms. Unlike other 12inch notebook computers, the M1210 features a builtin optical drive rather than an external. This model was discontinued as of July 31, 2007.It has a design very similar to the XPS M1710.

It was initially given the Nvidia GeForce 256 MB 6800 Ultra Go GPU which was a Dell exclusive at the time. The laptop was rebranded as XPS M170 soon after the GeForce Go 7800 GTX was incorporated. The Inspiron 9300 was based on it, being substantially the same laptop with an ATI Mobility Radeon X300 in the base model.This model features a choice of several Intel mobile processors, 14.1inch widescreen and between 512 MB to 2 GB of RAM. This model being more mediaoriented than gaming currently does not feature a dedicated graphics card. This model has been replaced by the E1405, a 14.1inch laptop physically similar the M140. It features the newer Intel Core Duo processors and Intels 945 chipset. It is no longer classified as an XPS laptop, however.The Mobility Radeon 9800 was based on the R420 core, the same as early ATI Radeon X700 and X800 desktop graphics cards, but with half the pixel pipelines disconnected. This could only be done on cores made before week 43 of 2004.The case featured an airbrush paint job completed by Mike Lavallee. Most notably, the machine was the first commercially available system to feature a Quad SLI configuration, with four custom NVIDIA GeForce 7900GTX graphics cards with 512 MB of memory. It also included a Western Digital hard drive spinning at 10,000 RPM.A portion of the profits made on this special edition are being put towards research for a cure for the AIDS virus.CS1 maint archived copy as title link Retrieved 20080629. We are a trusted supplier to 1000s of schools, government agencies, military and repair shops worldwide. Send your laptop to the Dell Experts! PartsPeople began as a small company 18 years ago in an extra bedroom of my house.

I had saved a small sum of money to purchase some computer parts and began selling them on eBay. After a few months I realized that people needed a place to go for Dell parts so I began building our website. Since we are located in Austin, Texas, where Dell.com was founded, I was able to set up a solid supply line with Dell. From the start, we focused on customer satisfaction and selling quality parts. We have grown a lot since 2002 but still and always the customer will come first. You will find that we go above and beyond with every order and offer free resources and support before and after the sale. PartsPeople.com has become the leading supplier of Dell laptop and tablet parts for consumers, businesses, government agencies, computer repair shops, school districts, and corporate firms. All orders are shipped same day MF from our 14,000 squarefoot Austin, Texas facility and also include a 1 Year Warranty! Although we are not affiliated with the Dell Computer Corporation, we have been specializing in Dell Laptop parts and Dell laptop repair services more than 18 years. At PartsPeople.com you can find whatever you need for your Dell laptop. This is why we have become the leading supplier of Dell laptop and tablet parts for consumers, businesses, government agencies, computer repair shops, school districts, and corporate firms. We offer all Dell parts for your business and individual Dell computer needs and have done so since 2002. We also offer Dell laptop repairs at our 14,000 squarefoot facility in Austin, Texas. We keep a large inventory of Dell laptop parts and refurbished Dell laptops so we can replace your Dell computer if it cannot be repaired. Also at this facility, is our Dell notebook recycling center. There are over 750,000 Dell laptop parts ready to ship, for your online order. Our online inventory is updated in realtime, to ensure that we only sell parts we have in stock.
